PRESS RELEASE

**NeXT ENCOURAGES CUSTOMERS TO ACCESS INFORMATION
AND SUPPORT USING NEW WORLD WIDE WEB SITE**

REDWOOD CITY, Calif. - January 31, 1995 - NeXT Computer, Inc. today announced that it now provides information and solutions to customers via the World Wide Web. Through its site - http://www.next.com/ - customers can access information about the company, its products and services, as well as access technical support from NeXTanswers, NeXT's technical support free information retrieval system.

NeXT's interactive Web site provides links to NeXT partners' home pages, including HP, SUN and Digital, and offers links to the published OpenStep specification, the industry-endorsed object standard. Additionally, through the Web site customers can obtain technical information and support, such as compatibility guides, software patches and drivers.

"At CERN, I developed the first client and server WorldWideWeb.app using NEXTSTEP in two months in 1990," said Tim Berners-Lee, who now directs the W3 Consortium at the Massachusetts Institute of Technology. "It was a combination of NEXTSTEP's object oriented environment, neat development tools, and a more powerful class library which made it possible - so it's great to see NeXT on the Web themselves".

"NEXTSTEP is the fastest way to build custom applications to vend products and services on the Web," said Steven P. Jobs, chairman and CEO of NeXT Computer, Inc. "Our distributed objects can even talk to each other transparently over the Internet."

Additionally, at the inaugural Web World Conference and Exposition, in Orlando, Florida, January 30-31, and the combined Web World and EMail World, in Santa Clara, April 19-21, 1995, Pages Software will demonstrate WebPages by Pages, the first fully WYSIWYG HTML editor, running under NEXTSTEP.

NeXT Computer, Inc.

NeXT develops and markets the award-winning NEXTSTEP object-oriented software for industry-standard computer architectures. Customers use NEXTSTEP's advanced object environment to rapidly develop and deploy custom, enterprise-wide, client/server applications. NeXT is headquartered in Redwood City, California, and has offices in North America, London, Paris, Munich and Tokyo.
